

Drinking treated water is one of the most important healthy factors to our student's physical activities and healthy life before, during, and after school.

Schools use a tremendous amount of water everyday, and require water for their restrooms, drinking water faucets, cafeteria, laboratories, and outdoor playing fields and lawns. Each student requires water on hourly bases for drinking washing and cleaning.

Unsafe water cause 80% of viruses skin diseases causes unstable health for many people on earth. If it is not properly treated, water can carry Harmful bacteria and should be removed to make water safe to our environment and beloved ones.

Schools are responsible for providing safe drinking and domestic water to their students, staff and visitors. Supporting your school with "Treatment water" gives your school a value to increase the oppotunities for students to be safe and healthy.
